UK Medical Freedom Alliance Submission to FDA

Re: VRBPAC meeting 15 June 2022 re expanding EUA for Pfizer COVID-19 vaccine to children 6 months to 5 years

We refer you to our recent Open Letterⁱ from February 2022, addressed to all Public Officer Holders Advocating or Administering COVID-19 Vaccines to Children giving them Notice of their Legal Obligations and Potential Liabilities. This letter provides referenced evidence regarding the safety of COVID-19 vaccinations in children as well as the legal requirements for obtaining fully informed consent.

Before you consider advocating or administering COVID-19 vaccinations for any children, especially children aged 6 months to 5 years, it is imperative that you thoroughly consider at least four evidenced and referenced points from our letter:

1. COVID-19 vaccines do not benefit children
2. COVID-19 vaccines do not prevent infection or viral transmission
3. The safety of the COVID-19 vaccines has not been established
4. Informed consent

We would like to highlight the following reasons why it would be an unforgiveable act of medical negligence to further extend the EUA for COVID-19 vaccines to even younger children:

- It would be completely reckless and a gross violation of medical ethics, as the risks from the COVID-19 vaccines to children (both known and unknown) FAR outweigh any negligible benefits
- This age group is at minimal risk for catching or passing on COVID-19 and, if infected, they are at almost zero risk of serious outcomes
- CDC data shows 99.99815% of children who contract COVID-19 survive so they do not gain any statistical benefit individually from a COVID-19 vaccine
- Most children have already acquired natural immunity by now which is shown to be robust, long-lasting and broad against future variants, so have ZERO benefit from being vaccinated
- Most COVID-19 cases are spread from adult to children - children are not a threat to the older population. In any case, it is unethical to risk harming a child, without any benefit to them, in an attempt to prevent them infecting an adult
- None of the COVID-19 vaccines being rolled out in the US are FDA-approved even for adults so this would be an expansion of the Emergency Use Authorization where no emergency exists for children aged 6 months-5 years
- There are NO long-term safety studies for the mRNA COVID-19 vaccines for this age group, or indeed for any age group, because the vaccines have not been used for long enough. Additionally, the placebo group was “unblinded” and allowed to get the vaccine, preventing the proper scientific assessment of long-term safety.

UK Medical Freedom
ALLIANCE

- There have already been many documented and accepted serious side-effects from COVID-19 vaccines, in both adults and older children e.g. myocarditis, clotting disorders, autoimmune disease, neurological conditions etc.
- Unprecedented levels of adverse events (injuries and deaths) have been reported to all global vaccine safety reporting systems for COVID-19 jabs, indicating that these may be the most dangerous vaccines ever rolled out on a mass scale to the public
- It is also not known if these experimental and novel, gene-based vaccines have any serious long-term health effects e.g. cancers, infertility, genetic effects, shortened life expectancy, as the trial participants have not yet been followed up for the 5-10 years or more needed to ascertain long-term safety. To take the chance of damaging the health, fertility, and life-expectancy of a generation of currently healthy children would be criminal

We beg you to rise above commercial and political pressures and instead put the health and lives of these babies and children at the centre of your voting decision by saying NO to this appalling proposal. Understand that you bear the responsibility of the lives and futures of millions of children. The blood of those who suffer harm and death will be on your hands if you vote for this appalling proposal. If you vote to extend the EUA to children under 5 years, you will never be forgiven by the parents of those children injured or killed, or by wider society.

Please stand firm, hold the line, and REJECT this proposal.
